SpiralTech

ENGINEERED BY DENTISTS - FOR DENTISTS

SPIRALGUIDE
GUIDED SURGERY SOFTWARE

SpiralGuide frees todays dental surgeon from the issues which plague so many outdated dental planning software suites, and goes above and beyond the standard features that would be expected in a modern treatment planning software.

With this software, SpiralTech gives dental surgeons an unparalleled edge in preparing surgeries with the ability to collaborate on complex issues, demonstrate treatment for patients, and teach interns both onsite and remotely. Taking full advantage of the technologies being developed, tested, and updated everyday by our team of software engineers based on both new research and feedback our team of oral surgeons, but also our clients and consumers.

The result of these innovations is a software that gives the surgeon not only ease of mind that the process and planning will be without flaw, but also an excellent tool that is at the forefront of modern medical technology that provides the patient with the best possible treatment in every case.

Automatic HIPAA Compliance

You decide which users have access to each patient's data. For protection of patient data, all uploaded content is encrypted during transmission and rest on SpiralTech servers.

One-Click Export for 3D Printer or Lab

SpiralTech uses advanced API technology to integrate with medical printing laboratories so that you can easily export your surgical template, or print it via your in-office 3D printer

Access to SpiralTech Implants & Abutments

The SpiralTech implants you place on your 3D model can be automatically ordered from SpiralTech with a single click.

Cutting-Edge 3D Imaging Technologies

Based on WebGL and deployed on Amazon Web Services, SpiralTech uses parallel computing to render 3D models for maximum performance.

Secure, Redundant Off-Site Backups

As a cloud-based system, all data uploaded to the SpiralTech platform is backed up securely without any effort from users.

Real-Time Collaboration with Colleagues

SpiralTech cases can be shared with another clinician in your practice. That individual can then log into the system, and you can simultaneously work on placing implants on the same 3D model.

New Features & Updates

Other dental implant planning platforms release upgrades on an annual or semi-annual basis. SpiralTech constantly releases upgrades based on user feedback and as new technologies become available.

No Installation Required

SpiralTech is a cloud-based platform that is accessed via web browser and runs on any desktop, laptop, or any sufficiently powerful tablet. (iPad Pro, Microsoft Surface)
